

CORRECTIONAL & PRISON SECURITY

Securing the Perimeter: Preventing Hidden Escapes and Intrusions by Vehicle

Identify the location of hidden people in vehicles

Modern prison security isn't just about keeping people in — it's also about keeping the wrong people out. One of the most critical vulnerabilities correctional facilities face today is the risk of inmates escaping or outsiders infiltrating by concealing themselves inside vehicles entering or exiting the premises.

Every delivery truck, service vehicle, and staff car that crosses the prison perimeter is a potential threat if not properly screened. Without advanced vehicle inspection solutions, these moving blind spots can be exploited to smuggle contraband, facilitate escapes, or enable unauthorized access — jeopardizing the safety of staff, inmates, and the surrounding community.

Benefits

- Affordable monthly subscription plans with no upfront costs
- Portable, lightweight device
- Quick results provided in under 60 sec.
- Accurate analytics developed by Oak Ridge National Lab
- Proven worldwide since 1996

How it Works

- 1 Driver turns off engine & exits vehicle
- 2 Place sensors on the vehicle
- 3 Start software
- 4 Software listens for 10 seconds
- 5 Clear Search or Pass result
